

Hazzel Free Shopping in Covid-19 Age

Enforce shopping discipline, make shopping/selling guidelines for local retailers as well people

Hassle free supply & buying of essential commodities following all the social distancing measures

Problem/s you are solving

- 1) Shopping for essentials without enforce social distancing.
- 2) Overcrowding at shops such as Grocery stores, Pharmaceutical Stores, Super Markets etc.
- 3) Ensuring unhindered supply of essential services with & without home delivery.
- 4) Converting manual coupon system to e-coupon for supermakets.

Solution

A mobile application can be built which can allow store owners as well as people to register themselves with their details.

So whenever people want to buy something from the store they can make a request on the app. People can send a list of products they wish to buy to the appointed shop.

Considering the addresses of both (customer & store), some nearest stores will be shown to customers. Out of these shops, customers can select the shop where they want to purchase products.

Customer can go and collect, pay at the time slot allocated to them.

In this way, crowd can be managed by allocating people to different time slots and stores, and sending the product list directly to the shop owner via app, makes the shop owner to keep a list of products ready with the bill, and also makes the customer avoid spending much time at the shop.

Innovation you bring in

In india it is not possible to implement home delivery for everyone considering the population, man power & geographical constraints. Hence providing a solution which can avoid overcrowding with/without offering home delivery.

Nowadays most of the supermarkets like D-MART are implementing coupon system, where people make huge crowd to to collect them & wait for their turn to shop, hence we are implementing e-coupon so that people can directly go to market at time slot allocated to them.

Future Aspects

If the app comes in real life use, then even after the lockdown, people can still continue buying things maintaining social distance.
